

# DATA SCIENCE EXPERTS GROUP

A better world through data science

## Data Systems and Applications

It's rare that any one aspect of data science occurs by itself. Typically, each part occurs within a larger context – we must first gather, then manage, then analyze, then present our data, and we often must do all of this on an ongoing, automated basis. When this is the case, developing a stand alone, comprehensive data system or data application can be the appropriate solution.

Members of DSEG have expertise in:

- Data Science System Design
- Data Science System Development
- Application Development
